

Using Norton Internet Security With Compnet Accelerator!

Norton will prompt you to "permit" or "block" the Accelerator file (pxclient.exe), once you click on "permit" it will continue to work as before.

In case the "block" option was chosen by mistake, please perform the following:

Double click on the Norton Internet Security icon (the little blue and green globe on the system tray).

Click on Personal Firewall and then click on "Configure"

Click on Programs, under Manual Programs Control look for Pxclient.exe on the list and change it to "Permit all" instead of "Block all".

Click OK.
